

Communicable disease service

About the Service

This service provides comprehensive care through communicable disease clinics, including prevention, control, early detection, treatment, and regular, thorough follow-up of communicable diseases (such as pulmonary tuberculosis, human immunodeficiency virus (HIV) infection, viral hepatitis, influenza), in accordance with the best available scientific evidence.

Service Process

- Receive the notification from a governmental or private healthcare entity.
- Inform the patient of the scheduled appointment to visit the center and complete the service procedures.
- Arrive at the center 20 minutes before the scheduled appointment.
- Assess and diagnose the patient's condition
- Implement disease control measures to limit the spread of infection e.g. isolation, concurrent and terminal disinfection, and treatment
- Provide treatment and determine whether medical isolation is required in hospital or at home, based on the clinical assessment.
- Provide health counselling and education, and schedule regular monitoring and follow-up appointments.
- Contacts measures: Contact tracing, health education, and contact investigation Prophylactic measurements e.g. vaccination/medical prophylaxis Health education and follow-up
